

Santos Dumont

ENGLISH ASSESSMENT

Versão 24C

2.0

*Para pilotos de helicóptero ou
pilotos de helicóptero e avião*

ANAC

AGÊNCIA NACIONAL
DE AVIAÇÃO CIVIL

Identification

Welcome to the *Santos Dumont English Assessment*. Today is the ____ (Day as ordinal number e.g.: 4th) of ____ (Month), ____ (Year). I am *(name)*. *(SME: "And I am (name). Nice to meet you.")*.

- 1) Please tell me your full name.
 - 2) Please sign here the same way you signed your ID. *(Ask candidate to sign the "Ficha de Solicitação de Serviço")*
 - 3) May I see your pilot's license and your ID? **State ANAC'S CODE** *(Thank you)*
 - 4) Do you have any electronic devices with you?
 - 5) *(Look at the camera, please.) (Thank you)*
-

Part 1 – Aviation Topics

Ok, shall we start? Part One: "Aviation Topics". In this part, you will answer some questions related to aviation.

- 1) Why do pilots need to take medical exams?
(If necessary: What does a pilot's medical exam consist of?)
- 2) In your opinion, what will communications between pilots and air traffic controllers be like in ten years?
(If necessary: Do you think all air traffic control communications in Brazil should be in English? Why?/Why not?)
- 3) What advice did your instructor give you before your first check ride?
(If necessary: How did you feel [on your first check ride]?)

<i>Follow-up questions, if necessary:</i> Why? / Why not? / How? / When? / Where? / What? Can you say that again, please? Can you give an example/some examples?	<i>Can you tell more about that? Can you explain it better? Have you ever been in/through this situation? Has it ever happened to you?</i>
--	--

Thank you. This is the end of part one. Let's move on to the second part of the test.

Please put the headset on. Let's check the volume.

 TRACK 1	<i>"Santos Dumont English Assessment: this is a sound check. Please confirm to the examiner if the volume is okay and you can hear the recording loud and clear."</i>
---	--

Part 2 – Interacting as a Pilot

Part Two: "Interacting as a Pilot". In this part, you will interact with the Air Traffic Control in five different situations. You may ask the controller to say again once. After listening to the controller, you should interact as the pilot. All information is important. You may take notes if you wish.

You are the pilot of a twin-engined wheeled aircraft. **Your call sign is ANAC 123.**

Wait 3 seconds for test taker to take notes if desired.

Are the instructions clear? OK, so let's start. Situation number one:

Situation 1) You are going to land at Heathrow Airport. Listen to London Control and read back.

Wait for 3 seconds for test taker to take notes if necessary.

 TRACK 2	ANAC 123, turn left [heading zero one zero degrees], [descend to flight level zero eight zero] and [reduce speed to one two zero knots]. [3]
	Minimum interaction: <i>"Turn left, heading 010, descend to FL 080 and reduce speed to 120kts, ANAC 123."</i>

<i>If the candidate did not interact with ATC as the pilot:</i> <i>You are supposed to interact as if you were the pilot.</i>	<i>If the candidate asks for a second repetition:</i> <i>You can only ask for one repetition.</i>
--	--

Imagine you have been instructed to hold and you have been in the holding pattern for a while. However, you are now running low on fuel. Call London Control and inform them that you need to land in fifteen minutes.

Minimum interaction: <i>"London Control, ANAC 123. We are running low on fuel and need to land within one five minutes."</i>	
 TRACK 3	ANAC 123, exit hold now [heading one three five]. Expect vectors to intercept [ILS two seven right]. [Confirm you need to land in five zero minutes]. [3]
	Minimum interaction: <i>"NEGATIVE. I need to land in one five minutes. Exiting hold heading 135. Expect vectors to intercept ILS 27R, ANAC 123."</i>

What did the controller say? **Wait for interaction.**

Thank you. This is the end of situation number 1. Now, situation number 2.

Situation 2) You are going to land at Manchester Airport. Listen to Manchester Control and read back.

Wait for 3 seconds for test taker to take notes if desired.

 TRACK 4	ANAC 123, Manchester Control, [descend to flight level zero six zero], [turn right] [heading one six zero], [expect one zero minute hold at Whiskey Hotel India VOR]. [4] Minimum interaction: <i>"Descend to flight level 060, right turn heading 160, expecting 10 minute hold at WHI VOR, ANAC 123."</i>
---	---

If the candidate did not interact with ATC as the pilot: You are supposed to interact as if you were the pilot.	If the candidate asks for a second repetition: You can only ask for one repetition.
--	--

Now, you are experiencing an engine high vibration and you need to land as soon as possible. Contact Manchester Control to report your problem and say your intentions.

Minimum interaction: <i>"Manchester Control, ANAC 123, we have an engine high vibration. We need to land as soon as possible."</i>	
 TRACK 5	ANAC 123, [fly direct to Manchester VOR] and [expect direct approach to runway zero five left]. [I understand you lost your left engine]. Confirm? [3] Minimum interaction: <i>"NEGATIVE. I did not lose an engine. I am experiencing high vibration. Fly direct to Manchester VOR and expect direct approach to runway 05L, ANAC 123."</i>

What did the controller say? **Wait for interaction**

Thank you. This is the end of situation number 2. Now, situation number 3.

Situation 3) You are at Vitoria Airport. Listen to Vitoria Tower and read back.

Wait for 3 seconds for test taker to take notes if desired.

 TRACK 6	ANAC 123, [cleared to backtrack], [line up and wait] [runway two four]. [Report ready for takeoff]. [4] Minimum interaction: <i>"Cleared to backtrack, line up and wait, runway 24, report ready for takeoff, ANAC 123."</i>
---	--

If the candidate did not interact with ATC as the pilot: You are supposed to interact as if you were the pilot.	If the candidate asks for a second repetition: You can only ask for one repetition.
--	--

Now, a flight attendant tells you that an unaccompanied minor has passed out. Call Vitoria Tower, explain the situation and request medical assistance.

Minimum interaction: <i>"Tower, an unaccompanied minor has fainted/passed out onboard. Request medical assistance, ANAC 123."</i>	
 TRACK 7	ANAC 123, [vacate the runway at taxiway Charlie] and [return to parking spot number three]. [Does the minor need assistance]? [3] Minimum interaction: <i>"AFFIRM. The minor needs medical assistance. Vacate the runway at Charlie and return to parking spot number three, ANAC 123."</i>

What did the controller say? **Wait for interaction**

Thank you. This is the end of situation number 3. Now, situation number 4.

Situation 4) You are going to land at Guararapes Airport. Listen to Recife Tower and read back.

Wait 3 seconds for test taker to take notes if desired.

 TRACK 8	ANAC 123, [continue your approach] to [runway one eight] followed by [circling to runway three six]. [Report downwind leg]. [4]
	Minimum interaction: <i>"Continue approach runway 18, followed by circling to runway 36. Report downwind leg, ANAC 123."</i>

If the candidate did not interact with ATC as the pilot: You are supposed to interact as if you were the pilot.	If the candidate asks for a second repetition: You can only ask for one repetition.
---	---

Now, you are cleared to land and this situation happens to you (**show the picture to the test taker**). Call Recife Tower to report the situation and say your intentions.

Minimum interaction: <i>"Recife Tower, there is a truck on the runway. Missed approach, ANAC 123."</i>	
 TRACK 9	ANAC 123, [turn left], [report downwind leg runway three six]. [Are you going around because of a runway incursion]? Confirm. [3]
	Minimum interaction: <i>"AFFIRM. We are going around because of a runway incursion. Turn left. Report downwind leg runway 36, ANAC 123."</i>

What did the controller say? **Wait for interaction**

Thank you. This is the end of situation number 4. Now, situation number 5.

Situation 5) You are at San Francisco Airport. Listen to San Francisco Ground and read back

Wait 3 seconds for the test taker to take notes if necessary.

 TRACK 10	ANAC 123, [approved taxi to the holding point], [runway zero one right], via [taxiways Golf, Bravo and Alpha]. Approaching holding point [monitor Tower (on frequency) one one eight point eight five]. Number six for departure. [4] Minimum interaction: “San Francisco Ground, taxi to the holding point, runway 01R, via taxiways G, B and A. Monitor Tower on 118.85, ANAC 123.”
--	---

If the candidate did not interact with ATC as the pilot: You are supposed to interact as if you were the pilot.	If the candidate asks for a second repetition: You can only ask for one repetition.
--	--

Now, during taxi, you see this (**show the picture to the candidate**). Call San Francisco Ground to inform them about the situation.

Minimum interaction: “San Francisco Ground, ANAC 123, there is a drone / UAV flying near my aircraft.”	
 TRACK 11	ANAC 123, [hold position]. Please confirm. [Is there debris near your aircraft]? [2] Minimum interaction: “NEGATIVE. There is a drone / UAV flying near my aircraft. Holding position, ANAC 123.”

What did the controller say? **Wait for interaction**

Thank you. This is the end of part two. Let's move on to the third part of the test.

Part 3 – Unexpected Situations

Part Three: “Unexpected Situations”. In this part of the test, you will listen to three different communications between pilots and air traffic controllers.

The recordings will be played twice. There is a five-second pause before the recording is repeated. After listening to the recording, you should tell me everything that the pilot and the controller said. I will then ask you a question.

At the end of Part three, I will ask you to compare the three situations, so please take notes. **All information is important. Do you have any questions?**

Situation 1) Listen to situation number one:

 TRACK 12	Pilot: Sao Paulo Departure, PP-TRS. [We were struck by lightning]. [Our (left) engine has failed]. [Request return to (Guarulhos) Airport] and [priority to land]. [4]
	ATC: PP-TRS, Sao Paulo Departure. Turn left [heading zero niner zero], [vectors to intercept final approach runway two seven left]. Maintain six thousand feet. [Altimeter setting one zero one five]. [3]

(If necessary: tell me everything you heard, please). Wait for interaction.

1) What else may happen to a helicopter if it suffers a lightning strike?

(If necessary: How would you react if you had an engine failure after a lightning strike?)

Situation 2) Listen to situation number two:

 TRACK 13	Pilot: Brasilia Center, PT-WSW, we are on heading three five zero, [maintaining four thousand feet] [due to GPS failure]. [Our iPad is also inoperative]. [Unable to inform estimated time over Alpha Tango Fox VOR]. [4]
	ATC: PT-WSW, Brasilia Center, Roger. [Resume conventional navigation]. [Intercept three five five radial] [outbound Brasilia VOR] [for eight zero nautical miles], then fly direct to Alpha Tango Fox. [4]

(If necessary: tell me everything you heard, please).

Wait for interaction.

2) Is GPS a completely reliable means of navigation? Why?/Why not?

(If necessary: In your opinion, how would today's air traffic management be without GPS navigation?)

Situation 3) Listen to situation number three:

 TRACK 14	Pilot: Mayday, Mayday, Mayday, Rio Control, PR-HMB. [Engine failure], [entering autorotation]. [2]
	ATC: PR-HMB, Rio Control, roger. Confirm your position.
	Pilot: [Over beach line], [abeam Marica], HMB. [2]
	ATC: PR-HMB, [report on the ground] if possible. [1]
	Pilot: Wilco, HMB.

(If necessary: tell me everything you heard, please).

Wait for interaction.

3) What does a helicopter pilot need to do in order to execute a safe autorotation landing?

(If necessary: How would you react if you had an engine failure after a lightning strike?)

Thank you! You may remove the headset now.

Make sure the microphone is close to the candidate.

Now, after listening to these three situations:

4) How would you compare them, which one do you think is the most difficult to deal with and why? You may want to compare them in terms of severity, possible solutions or ways of prevention.

Follow-up questions, if necessary:

Why? / Why not? / How? / When? / Where? / What?

Can you say that again, please?

Can you give an example/some examples?

Can you tell more about that?

Can you explain it better?

Have you ever been in/through this situation?

Has it ever happened to you?

Thank you! This is the end of part three. Let's now move on to the last part of the test, part four. **Collect all notes made by the test taker and eliminate them.**

Part 4 – Picture Description and Discussion

Part 4: Picture Description and Discussion. In this part, you will tell me what you can see in this picture (**show the picture to the test taker**) and what you think is happening in it. After that, I will ask you some questions. (**Pause**) Look at the picture carefully. You may take a few moments to think before you start talking.

1	Please describe this picture to me. <i>If necessary:</i> - What's happening in this picture?
2	Choose one: What do you think happened before this picture was taken?; or What do you think the pilots were doing before this picture was taken? What do you think was happening before this picture was taken? Can you create a short story based on this picture? Use your imagination.
3	Now imagine that this picture has just been taken: What do you think will happen next?
	Only for more proficient candidates / Choose one: If you faced an emergency situation in-flight, how do you think you would handle it? Do you think you would handle a real emergency situation in the same way as in the simulator?

Picture A:

Picture B:

4) Has an increase in the use of simulators for training pilots made aviation safer? How?

Ask the following question if candidate asks for clarification:

Has safety increased due to the use of simulators?

5) What is the most serious emergency situation a helicopter pilot may deal with? Why?

Ask the following question if candidate asks for clarification:

What is the most difficult situation that a helicopter pilot may face? Why?

6) Now, I am going to read a statement to you and you will tell me to what extent you agree or disagree with it.

“Although simulators can accurately replicate aircraft operations, it is less complicated for pilots to cope with emergency situations in simulators than in real flights.”

Ask the following question if candidate asks for clarification:

How much do you agree or disagree with the following statement?

“Dealing with emergency situations in simulators is easier than in real life.”

Possible follow-up questions to be asked if necessary:

Why? / Why not? / How? / When? / Where? / What?

Can you say that again, please?

Can you give an example/some examples?

Can you tell more about that?

Can you explain it better?

Have you ever been in/through this situation?

Has it ever happened to you?

Ok, thank you! So this is the end of the test. Thank you very much for coming.
